

# "I've put my old workhorse out to pasture!"

Thanks to Zirlux® I now have a new workhorse!

**F**or as long as I can remember, I have been placing PFM restorations on posterior teeth. PFMs have been my "workhorse" restoration for molars, especially second molars where porcelain failure is greater. However, since we do so many cosmetic smile make-overs in my office, I have found that patients do not want any metal in their mouths. Due to the increased demand for cosmetic restorations, I had to find a restoration that provides both esthetics and strength. Enter Zirlux® from R-Dent Labs. Patients love these Zirlux® restorations because they look so natural. I love them not only because they are esthetic, but because my chances of having chips or fractures with these are almost non-existent! These restorations fit great and adjustments are made easy with the custom burs that R-dent supplies. R-dent works one-on-one with our office to discuss any difficult situations and they are always easily reached. Zirlux® zirconia restorations from R-Dent Labs is my new workhorse and I suggest these crowns to any patient requiring posterior crown work. "

Todd Higginbotham, DDS Higginbotham Family Dental  
Offices in Jonesboro, Blytheville, Trumann, Leachville, & Paragould

If you need a new, strong, esthetic workhorse for your practice, you need Zirlux®!

Zirlux® is a monolithic solid zirconia crown or bridge restoration. Virtually chip-proof, Zirlux® Solid Zirconia crowns & bridges are the ideal restoration for bruxers, implant restorations and areas with limited occlusal space. Zirlux® crowns & bridges are backed by a seven-year free replacement warranty.
