MEET THE LABORATORY

R-dent Laboratory

BUILDING LASTING RELATIONSHIPS

Pictured above are members of R-dent Lab that have at least 1 family member working in the lab, truly encompassing R-dent’s value of family and relationships. The lab currently runs with a team of 45 total employees.

Since 1978, R-dent Laboratory, the largest privately owned, full-service dental laboratory in Arkansas, Mississippi, and Tennessee, has focused on providing its dentist partners with diverse and high-quality products coupled with outstanding customer service.

Dr. Jonathon S. Egbert of Memphis, TN, appreciates the R-dent team’s excellent communication skills. “Complex implant and restorative cases are a big part of my practice,” says Dr. Egbert. “It is essential...to work with a lab that is willing to communicate and provide high-quality, dependable prostheses...I have been extremely impressed with the support...provided...by the removable department at R-dent.”

Another central focus of R-dent’s mission is working with and recommending the best restorative products available. Melissa Guardiola, R-dent’s Fixed Department Manager, makes special note of Zirlux FC2—a full-contour zirconia that offers an efficient and reliable method for producing esthetic monolithic zirconia restorations. “After experimenting with 5 different zirconia manufacturers over the past 2 years, I do believe we have found the best in Zirlux FC2,” says Guardiola. “It is more translucent than any other we have tried. The shades are very true to Vita shades. The color is consistent all throughout the crown, not just on the surface.”

Through consistent, open communication and the choice of the best available products and technology, R-dent builds lasting relationships that benefit the doctor, the patient, and the lab.
